What is Ativan (Lorazepam)?

Ativan (Lorazepam) is a prescription medication that acts on the central nervous system to produce a calming effect. It belongs to a class of drugs known as benzodiazepines, which work

by enhancing the effects of a natural chemical in the body called GABA. The result is a feeling of relaxation, reduced nervous tension, and improved sleep quality.

Doctors across the USA often prescribe Lorazepam to individuals dealing with anxiety disorders, severe stress, or insomnia. It's also used before surgical procedures to reduce anxiety and promote sedation. However, it's important to use Ativan only under a healthcare professional's supervision and in the prescribed dosage.
